

The new M 350 Mobilair portable compressor

Powerful and efficient

With a free air delivery of up to 34 m³/min, the Mobilair M 350 is the new powerhouse in Kaeser Kompressoren's comprehensive portable compressor range. Positioned in the highest performance tier, this system offers significantly more than just impressive compressed air power: It is also exceptionally versatile, fuel-efficient and features environmentally-responsible design.

The future is now - thanks to the M 350. Equipped with an ultramodern Mercedes-Benz diesel engine renowned for its low carbon particulate production and exhaust emission system featuring an SCR catalytic converter, the M 350 already complies with the COM 3B EU exhaust gas emission standard. This not only enhances resale value, but also enables leasing companies and end users alike to benefit from all of the advantages that the latest environmentally-responsible technology has to offer.

The powerful combination of an economical Mercedes Benz engine and an efficient Kaeser rotary screw airend with proven Sigma Profile rotors provides impressive compressed air delivery with minimal emissions and fuel consumption. Additional innovations help boost savings even further. A viscous fan clutch controlled via Kaeser's Sigma Control Mobile, for example, cuts fuel consumption by up to five percent.

Moreover, an extensive range of available options ensures outstanding versatility for near endless application possibilities; for example, a choice of various pressures, a stationary version or specialised equipment for use in refineries.

Air treatment components can be added to provide cool, dry, technically oil-free air of various classes to meet the special demands of e.g. concrete repair as per German ZTV-SIB regulations. Despite these additional features and a twenty percent increase in compressed air delivery, the M 350 is barely heavier than its predecessor.
